TI Anti-proliferative drugs

AB The present invention relates to methods for the treatment of diseases associated with hyper-proliferation of cells by administering to a subject in need a therapeutically effective amount of at least one psychotropic agent. Specific proliferative diseases against which psychotropic agents were found to be effective are cancer, including multi-drug resistant cancer and diseases associated with hyper-proliferation of the skin cells, such as psoriasis and hyperkeratosis. Among the examples provided is one demonstrating the effectiveness of topical administration of thioridazine cream on psoriasis in a couple of patients. The effectiveness of psychotropics in inhibiting proliferation of cancer cells and in sensitizing doxorubicin cytotoxicity is demonstrated in various laboratory animal models.
